Linux

We recommend that you first try to install TeXstudio from the repository of your distribution. Only if TeXstudio is not available there, use the following pre-packaged versions.

For Ubuntu, a PPA is available: [PPA](#)

Furthermore, an app-image is available which can be run on any platform: [appimage](#) (). Just make the file executable and run it.

Builds for other architectures (ARM, PPC) can be found directly on the OpenSUSE build service: [OBS](#)
